DRC3a data collection and monitoring coverage

All Ndosho electricity, generator, fuel and device-load records belong to one facility collection.

Bars show file or study spans, not continuous coverage. HOPmeter device files end by 18 Jan 2024; none overlap the Jan 2025 event.

Both PowerWatch sensors returned in May–June 2022 and January–February 2025. October 2026 returns one; full paired history remains unverified.

The DRC2 survey is later than the event. Generator hours, voltage, device power, delivered oxygen and clinical outcomes remain distinct evidence layers.

Sources and exact timestamps: dataset_time_mapping.csv and collection manifests. Ward table includes one separate January 2024 date that remains unverified.
